RoadRelay™ 5

RoadRelay™ 5.

Cummins next-generation engine and vehicle electronic systems monitor now provides even better information for drivers, maintenance supervisors, safety directors and everyone involved in fleet operations. Of course, the same features also make it great for personal vehicles, such as motorhomes.

Better Productivity. RoadRelay 5 displays and records critical information, including fuel usage, mileage, engine hours spent in idle, power take-off (PTO) and other operating modes. You can also identify and track performance data for up to 16 different drivers in a single vehicle.

Better Spec'ing and Customization. RoadRelay 5 works with Cummins PowerSpec, a free configuration tool that allows you to quickly modify parameter settings, customizing individual RoadRelay parameters to match a specific need or to make sure settings are identical across an entire fleet.

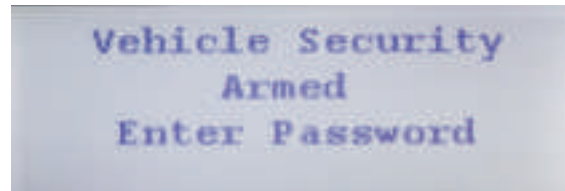

Better Service Info. RoadRelay 5 tracks customizable service intervals for oil changes, filter changes, coolant system flushes and many other common serviceable components, notifying you when maintenance is needed. If a serviceable item is not listed, you can create your own using the customizable preventive maintenance option.

Better User Interface. A graphical liquid crystal display (LCD) makes the unit easier to read and use in direct sunlight and automatically dims when the vehicle headlights are turned on for night driving. There's an adjustable brightness control, and the six keys are backlit for easy viewing, day or night. In addition, the navigational arrow keypad and an icon menu-driven display make it easy to find the information you need.

Better Vehicle Protection. RoadRelay 5 monitors your powertrain and all connected subsystems. If an unexpected event happens, RoadRelay 5 will tell you how to minimize potential damage. The popular antitheft feature is now integrated with Driver ID, allowing you to use one password to secure your vehicle and to keep track of individual driver data.

Better Connectivity. RoadRelay 5 includes two Universal Serial Bus (USB) ports. The USB port on the front panel makes it easy to download data with PowerSpec or other RP1210A-compliant applications, while the port on the back can be used for attaching a keypad or for future expandability. There are two serial ports as well. One is configurable, allowing you to connect with a Global Positioning System (GPS) receiver, a modem or a device using the Cummins Open Interface Specification. The second serial port allows for an additional PowerSpec or other RP1210A-compliant applications.

Better Integration. Earlier versions of RoadRelay required a separate INLINE™ adapter when downloading information. RoadRelay 5 has the INLINE adapter built into the unit, eliminating hassle and extra expense.

Upgrading from a RoadRelay 4? RoadRelay 5 uses the same electrical connections, so you can just pull out the RoadRelay 4 and connect RoadRelay 5 for an instant upgrade. RoadRelay 5 also incorporates a lithium rechargeable/replaceable backup battery, reducing the risk of memory loss.

Every Question Answered.
